Professional Summary

Senior Frontend Engineer with 7+ years of experience building scalable, high-performance web applications for fintech and travel tech industries. Proven track record of driving business impact through technical excellence, including contributing to 30% revenue growth and achieving 30% performance improvements. Expert in React ecosystem, micro-frontend architecture, and performance optimization. Skilled at leading frontend initiatives, mentoring engineers, and collaborating with cross-functional teams to deliver user-centric solutions for enterprise clients.

Skills

Frontend Technologies: React.js, Next.js, Angular, TypeScript, JavaScript (ES6+), Redux, React Query, HTML5, CSS3, Tailwind CSS, Material UI, Styled Components

Backend & Databases: Node.js, Express, C#, .NET, ASP.NET, SQL Server, NoSQL

Build & DevOps: Webpack, Docker, Git, AWS, CI/CD Pipelines, Jest, Unit Testing

Architecture & APIs: Micro-frontends, Component Libraries, RESTful APIs, GraphQL, Design Systems, Server-Side Rendering

Leadership: Technical Mentoring, Code Review, Cross-functional Collaboration, Agile/Scrum, Architectural Decision Making

Experience

Senior Frontend Engineer **CSG International** *Jakarta, Indonesia* **07/2025 - Current**

- Architected micro-frontend migration strategy to modernize legacy AngularJS enterprise platform serving thousands of telecom billing users, enabling gradual Angular integration while maintaining business continuity for mission-critical Quote & Order workflows

- Led 3-person frontend team within cross-functional squad, driving acrhitectural decisions, implementing code review standards, and mentoring mid-level engineers

- Implemented containerized development environment using Docker, standardizing local and staging setups across engineering team and eliminating environment inconsistency issues

- Served as frontend subject matter expert for core Quote & Order application, ensuring platform stability and optimal performance for enterprise telecommunications clients across APAC region

Frontend Engineer **TruTrip** *Jakarta, Indonesia* **12/2022 - 07/2025**

- Engineered sophisticated booking policy management system enabling dynamic travel policy enforcement and approval workflows, directly contributing to 30% revenue growth for the corporate travel booking platform
- Optimized application performance by implementing React Query for intelligent data fetching and caching, reducing redundant API calls by 30% and significantly improving load times across all booking workflows
- Developed and shipped 3 comprehensive analytics dashboards providing real-time insights on booking patterns, policy compliance, and travel spend, enabling data-driven decision- making for 100+ corporate clients
- Implemented clustering algorithm for hotel map visualization using third-party mapping APIs, optimizing rendering performance for searches returning 500+ results and improving user experience
- Built React Native mobile application integrating WebView components from core web platform, extending TruTrip booking functionality to iOS and Android users with seamless authentication and session management

Frontend Engineer **Brick** *Jakarta, Indonesia* **01/2022 - 11/2022**

- Created comprehensive user portal with React.js and Redux featuring real-time transaction reporting, bulk disbursement tools, API key management, and customizable widgets, empowering B2B clients with self-service capabilities
- Designed and implemented internal analytics dashboard providing operations team with real-time visibility into API usage patterns, transaction volumes, and system health metrics for proactive monitoring
- Developed headless CMS-powered marketing website using Next.js, DatoCMS, and GraphQL, enabling non-technical marketing team to update content independently and reducing developer dependency by 80%
- Built embeddable authentication widget enabling users to securely connect bank accounts, e-commerce platforms, and e-wallets, serving as core integration point for Brick's open finance API and supporting hundreds of enterprise clients

Frontend Engineer **TruTrip** *Jakarta, Indonesia* **11/2019 - 12/2021**

- Served as founding frontend engineer, architecting and building TruTrip's core application from scratch using React.js, Redux, and Material UI, establishing the technical foundation that scaled to support 100+ weekly bookings
- Delivered production-ready MVP in 4 months featuring complete flight and hotel booking workflows, corporate travel policy engine, trip history management, and comprehensive reporting dashboards, enabling successful launch with initial corporate clients
- Collaborated directly with founders, product team, and backend engineers to define product requirements, user flows, and technical architecture in fast-paced startup environment with rapid iteration cycles
- Established frontend development standards including component architecture patterns, state management conventions, and code review processes that supported platform growth and engineering team expansion
- Established frontend development standards including component architecture patterns, state management conventions, and code review processes that supported platform growth and engineering team expansion

Frontend Engineer **Gadjian** *Jakarta, Indonesia* **11/2018 - 11/2019**

- Built employee benefits marketplace platform (Payuung.com) from ground up using Next.js, successfully migrating 2,000+ users from legacy system and introducing integrated loans and insurance products from third-party financial providers

- Introduced Next.js to company tech stack, pioneering server-side rendering patterns and creating comprehensive documentation that enabled adoption across multiple product teams

- Launched MVP at Tech in Asia 2019 conference, showcasing platform capabilities to investors and potential enterprise customers in high-visibility startup showcase

- Integrated multiple third-party financial services APIs including loan providers and insurance carriers, implementing secure OAuth flows, webhook handling, and transaction processing logic

Software Engineer **Emerio Indonesia** *Jakarta, Indonesia* **09/2017 - 11/2018**

- **Application Support Developer** | PT. Maybank Indonesia (09/2017 - 05/2018)
  - Developed internal applications using ASP.NET C# and SQL Server, supporting marketing operations and automated customer communication workflows for banking operations

- **Application Developer** | Toyota Astra Motor (05/2018 - 11/2018)
  - Built e-faktur tax invoice application using ASP.NET C# and SQL Server for automotive sales operations • Designed database schemas and optimized SQL queries for production deployment

Education

Bachelor of Information system **Trilogi University** *Jakarta, Indonesia* **2016-2020**

- Major software engineering

Diploma of Software engineering **CCIT Univeristy of Indonesia** *Jakarta, Indonesia* **2015-2017**

- Major software engineering

Certification

Cisco Certified Network Associate (CCNA) **2015-2017**
